Additional information

Storage	Store flat, in a dry and well-ventilated place, away from direct light and moisture. Optimal temperature between 5 °C and 25 °C.
Shelf life	Unlimited under compliant storage conditions. Damp wood does not light properly: dry before use in case of accidental exposure to moisture.
Usage tips	Insert the wick into the metal clip and centre it in the container using a wick centring device. Pour the wax and allow to set for 24 to 48 h. Trim the wick to 3-5 mm before each lighting. Wick width is selected according to container diameter, wax and fragrance load: a burn test is essential before any placing on the market.
