	SPECIFICATION	9-10

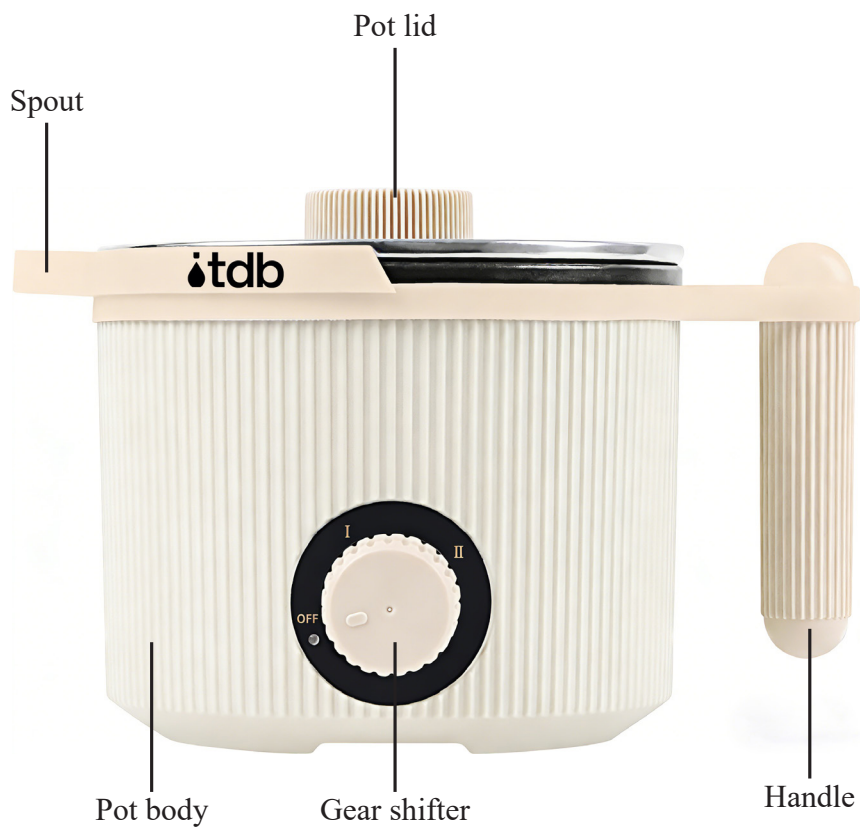

READ BEFORE USE

1. Before use, please confirm that there are no combustibles within 3M around.
2. The melter body will generate high temperature during use, please do not touch it, and prohibit pets from approaching; please take safety measures when using it.
3. Please wear high temperature resistant gloves, high temperature resistant apron and other labor protection supplies when using.

1. SAFETY INSTRUCTIONS

- This product is an electrical product, and safety precautions should be followed to avoid accidents.
- In order to prevent electric shock accident, the machine must be connected to a correctly grounded socket, and the correct voltage must be selected to ensure correct grounding. It is not allowed to be exposed to rain or humid environment. When not in use, please disconnect the power supply. After the machine is completely cooled, it can be stored in a suitable place.
- This device is not intended to be used by persons (including children) with physical, sensory, or mental impairments or lack of experience and knowledge, unless they are supervised and instructed by those responsible for their safety.
- If the power cord or the machine is damaged, it must be replaced and repaired by the manufacturer or authorized service agent to avoid danger.
- It is strictly forbidden to use this equipment in a humid and corrosive environment, and do not use this equipment in a combustible or explosive environment. After the machine is turned on, someone needs to take care of it to ensure safe operation.
- When replacing product parts, please use original accessories.
- This product complies with CE, FCC, ROHS and other certifications, and has applied for an industry patent, and counterfeiting must be investigated.

2. APPEARANCE

3. PARAMETER

Input voltage	AC230V
Rated power	450W
Frequency	50HZ
Gear position	Level I: 225W, Level II: 450W

4. USER GUIDE

4.1 Safe boot

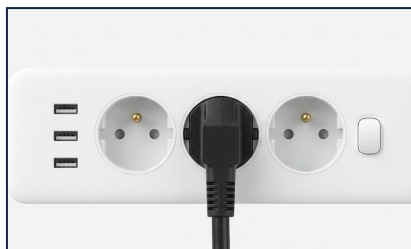

(1) This machine needs to be used indoors. Before use, it should be placed on a horizontal table. The distance between the machine and the wall should be more than 10 cm.

(2) Connect the power supply, the power socket must have a reliable grounding protection.

(3) Put the wax beans into the machine before starting it to avoid dry burning of the machine; long time dry burning of the machine may burn out the heating tube.

4.2 Parameter settings

(1) Connect the power supply.

(2) Adjust the gear knob to turn on the machine.

4.3 Steps to melt the wax

(1) Add wax beans, start the machine and start melting the wax.

(2) During the heating process, it is recommended to stir the wax beans in the pot with a spoon every 3-4 minutes. This will make the temperature in the pot more uniform and melt the wax faster.

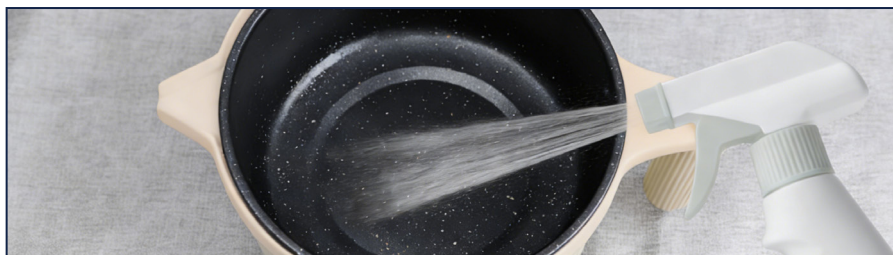

(3) When all the wax beans are melted, prepare a container for the wax and slowly pour the wax liquid into the container.

4.4 Cleaning

(1) **Remove excess wax** : Once the wax has cooled slightly but is still liquid, ball up a paper towel and use it to wipe the inside of the pan, replacing the paper towel when it becomes saturated with wax. Wear gloves to protect your hands from the heat when wiping the wax. If the wax becomes a little too hard to wipe off with a paper towel, heat up the wax melter and after the wax has melted into a liquid, turn off the power and wipe off the liquid wax with a paper towel.

(2) **Alcohol wipe** : If there is still any remaining wax residue, wipe down the inside of the furnace with rubbing alcohol after the pot has cooled. If you have used colored wax in the furnace, the alcohol may also help remove stubborn dye residue.

(3) **Deodorizing** : If the inside of the furnace still smells like the added fragrance you used in the last batch of candles, sprinkle the inside of the furnace with baking soda to freshen it up. Wet a scrubbing sponge and use the sponge to gently scrub the interior. Leave the wet baking soda residue in the pot for 30 minutes or so, rinse again and dry with paper towels.

5. DISCLAIME

- (1) This product is not suitable for children.
- (2) If the internal circuit of this product is disassembled without permission and components not supplied by our company are replaced, resulting in product damage, we are not responsible for it.
- (3) For all products sold, the company first requires that on the premise of strictly using assembly and necessary technology, we are only responsible for the after-sales of the product (when repaired or replaced). The manufacturer confirms that it is a quality problem. The company is not responsible for any other loss and injury.

SPECIFICATION

Model	AP-FONDOIR-TDB-1.5L
Trademark	Terre de Bougies
Input voltage	AC230V ; 50 Hz
Material	Stainless steel
Rated power	450 W

Trader information

Trader	Terre de Bougies
Postal address	1 Rue de la Clef des Champs 68600 Volgelsheim, France
